REASONS FOR ALLOWANCE

This action is in response to the submission of 11/19/2009 and the supplemental arguments and 132 declaration submitted 1/8/2010.

Claims 13-15 and 18-32 are allowed.

1. The following is an examiner's statement of the primary reasons for allowance:

The examiner found the closest prior art to be NISHINO which teaches that the polymer solution can range from a pH of 6 to 11 [column 7 lines 40-43] which is abutting with the range of at most 6. The examiner found the 132 declaration dated 1/8/2010 by Ahlgren convincing that the conventional method of making poly-alpha-hydroxyacrylic, conventional radical polymerization technique, referred to in the instant application denoted a step of increasing the pH to at least 8 (therefore necessitating withdrawal of rejections based upon AAPA). The examiner additionally found convincing the arguments that it would be non-obvious to use the raw poly-alpha-hydroxyacrylic acid polymer at a pH of at most 5 and hence cutting short the conventional process.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

The examiner found a double patenting issue with application 11/570452, the application has been withdrawn from issue as of 2/5/2010 with the filing of an RCE with an IDS submission. Since the instant application is the earlier filed application and will pass to issue first it is proper not to maintain or issue a double patenting rejection [see e.g. MPEP 804 (I) (B)] over the 11/570452 application.

The examiner did not file a double patenting rejection towards 10/538,074 because this is a composition claim and would have been restricted from the instant claims as being an independent invention/statutory class.

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

U.S. Patent 4,916,178 AMATI et al., discloses that the pH of poly-alpha-acrylic acid salts should be between 6.5-7.1 [column 1 lines 45-57]
